

DATA DRIVEN POLICING

As a Smart City, Seat Pleasant uses the latest cutting-edge technologies to strengthen safety and security, invigorate the local economy, cultivate sustainable urban development, and enhance the lives of our residents.

How do the Smart City technologies help keep the city safe?

The Seat Pleasant Police Department Leverages the vast data that is collected and analyzed by the City's Center for Government Synergy (CGS), to gain real-time situational awareness, identify crime "hot spots," and to predict crime before it occurs.

Why do the police frequent some areas more than others?

Patrol deployment and strategies are based on a myriad of factors including the city's geography, available staffing, agency initiatives, weather conditions, level of calls for service, seasonal trends, the intensity of crime in certain areas, and the prevalence of traffic-related safety issues, among others.

Ultimately, the goal is to maximize the efficient delivery of police services and to allocate resources where they are needed the most. It's important to remember that the best indicator of efficiency is not the visibility of the police or number of arrests, but rather the absence of crime in general.
